However, there is no mention of a receive antenna comprising a directional characteristic positioned in such a way in the vehicle that produces receive signals of different power in each case for at least two of the transmit units in conjunction with an evaluation unit which compares the receive power of the received signal with stored threshold values or ranges of values assigned to one wheel position and assigns the received signal to a wheel position, if the threshold value is exceeded or the receive power lies within the range of values assigned to this wheel position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
